

HW1 Flow Matching Policy Report

Qualitative Comparison: MSE vs Flow Matching

Summary

Best MSE checkpoint reward: 0.651 at step 70000. Best flow checkpoint reward: 0.861 at step 75600. Final MSE reward: 0.561. Final flow reward: 0.861. Both losses decrease during training, but the flow policy achieves the stronger reward curve and finishes at a higher evaluation score.

Qualitative Description

Qualitative comparison from the rollout videos: the flow matching policy approaches the target more directly, keeps the block better aligned during contact, and completes the pushing motion more consistently. The MSE policy often shows less stable contact geometry and more drift, which leads to weaker final placement and lower reward.
